

**Metsä**

# Where microbes and forest industry meet

Katariina Kemppainen, SVP Group R&D, Metsä Group

17.9.2024 KCL Biohub seminar Microbiology for forest industry

# Metsä Group | Sales\* EUR **6.1** billion | Personnel **9,500** | Renewable energy **26,9** TWh

**Metsäliitto Cooperative** | The Group's parent company | Owned by over 90,000 Finnish forest owners

## METSÄ FOREST

**Wood supply and forest services**

Sales:  
**EUR 2.2 billion**

Personnel:  
**700**

## METSÄ WOOD

**Wood products**

Sales:  
**EUR 0.6 billion**

Personnel:  
**1,550**

## METSÄ FIBRE

**Pulp and sawn timber**

Sales:  
**EUR 2.5 billion**

Personnel:  
**1,600**

## METSÄ BOARD\*\*

**Paperboard**

Sales:  
**EUR 1.9 billion**

Personnel:  
**2,250**

## METSÄ TISSUE

**Tissue and grease-proof papers**

Sales:  
**EUR 1.3 billion**

Personnel:  
**2,500**

**METSÄ SPRING** | Innovation company

# Well where do they meet?

In the forest

At the mill

During the use of the product

# In the forest

## Microbes are important part of the biodiversity of the forests

- High-throughput DNA sequencing for determining new biodiversity metrics

RESEARCH ARTICLE

## Large-Scale Biomonitoring of Remote and Threatened Ecosystems via High-Throughput Sequencing

Abstract

# In the forest

## Fungi are a major cause of forest damages

- *Heterobasidion parviporum* and *Heterobasidion annosum* in Root rot disease
- *Peridermium pini* in Resin top disease.

## Fungi can also be used to prevent diseases

- *Phlebiopsis gigantea* replacing urea in stump treatment

## The most common causes of forest damage in 2014–2018

SNOW

**1 108 300**

Damaged area, hectares

HOOFED ANIMALS

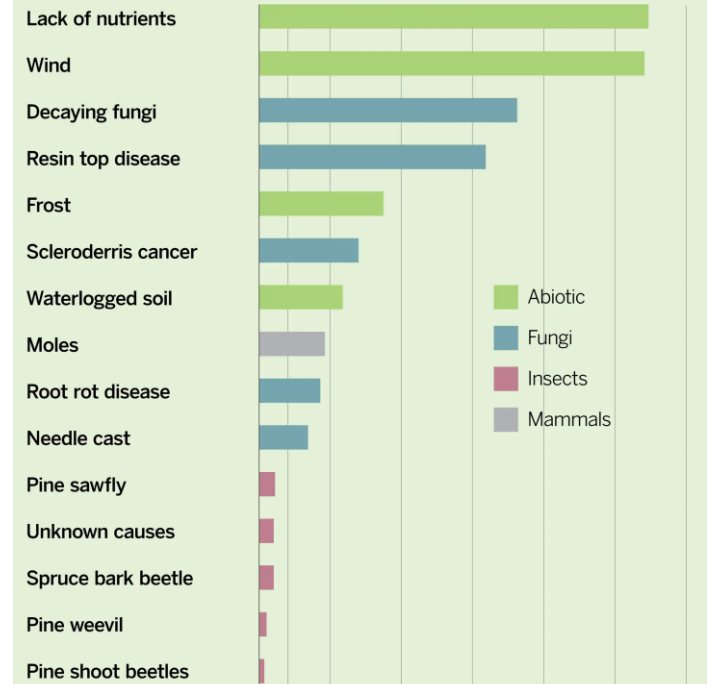

**555 200**

Damaged area, hectares

Other causes of forest damage

Damaged area (1,000 hectares)

0 20 50 100 150 200 250 300

# At the mill

## Microbiological stability during the storage of biomass needs to be considered

- This aspect becomes important especially when planning new uses for woody side streams

# At the mill

**Microbiological control in process waters becomes increasingly important when water consumption is reduced and processes closed**

- Biofilms, biocides, early detection, AI supporting process control

# At the mill

## Waste water treatment is based on microbes!

- Microbes are critical in keeping our emissions under control.
- What is the aerobic stage 2.0 of the future?

# At the mill

## Enzymes have current use and further potential!

- Role as processing aids in parallel with chemicals
- One way to produce new functionalities to fibres

# During use of the product

## Product safety is central in food service and packaging

- Microbiology affecting through raw materials, processes and storage/shelf-life

# During use of the product

Hygiene products have high requirements regarding microbiology

- How do fresh fibres and recycled fibres compare?

# During use of the product

## Microbes and wood may meet in built environment

- Indoor air quality
- Perceived user experience

# Multiple meeting opportunities for microbes and forest industry!
